What's the Fuss All  
About....

# Introduction to the FPDS-NG initiative

- In 1978, the Federal Procurement Data Center (FPDC) was established. FPDC was tasked with development of an automated system for collecting, evaluating, and making available information about federal procurement contracts. As a result, the Federal Procurement Data System (FPDS), managed by the General Services Administration (GSA), went online in 1979.
- On December 17, 2002, the E-Government Act of 2002 (2002 Act) was signed by President Bush. Part of the 2002 Act calls for the development of an Integrated Acquisition Environment (IAE). Improvement in the FPDS infrastructure was identified as an important part of the IAE initiative.
- On April 23, 2003, General Services Administration (GSA) awarded a contract to Global Computer Enterprises, Inc. (GCE), a small business from Reston, VA, to develop and implement the Federal Procurement Data System - Next Generation (FPDS-NG).
- The Old - legacy FPDC was looked to for basic, electronic collection of contract reporting data, while, at the same time, government agencies maintained their own databases for data analysis and responding to Congressional inquiries.
- The New - FPDS-NG model does away with individual agency-level contract reporting databases. Therefore, it will be relied upon for mission critical activities across the federal government.

## BUSINESS TRANSFORMATION

# What else does this mean for you?

- Not only is more detailed procurement data being entered and compiled much faster, it is now available to virtually anyone with internet access
- This means – even more scrutiny of DoD performance
- No more feeder systems – no more multi-level data quality assurance
- You become DoD's first and last line of defense to ensure data accuracy
- Key thing to remember – the data you enter is now being relied upon across DoD to help it support the warfighter in the 21<sup>st</sup> century environment

**NO**

**YES**

**BUSINESS

BUSINESS TRANSFORMATION AGENCY

How significant an  
undertaking is this?

# BUSINESS TRANSFORMATION

## Scope of Deployment

# So, what does it all mean?

## **IT IS....**

- New
- Big
- A significant challenge / change
- There's going to be some frustration

## **BUT....**

- It will enable us to fulfill our mission of supporting the warfighter –
  - More effectively
  - More efficiently
  - More flexibly

## **AND....**

- None of us is as smart as all of us
- It is going to take a true **team** effort, and that's why we are here today....

## DoD's FPDS-NG Training Day

Project Overview and Status  
Back-up Information

# My Reports - Enhanced Access to Data/Information

## Standard reports

- Those reports that are commonly used by many users (e.g. Top 100 Federal Contractors)

- Available to public users without the need for a user id and password

## Ad Hoc reports

- Reports that join different tables to create a custom view of the data
- Some limits may be placed on the ability to create ad hoc reports

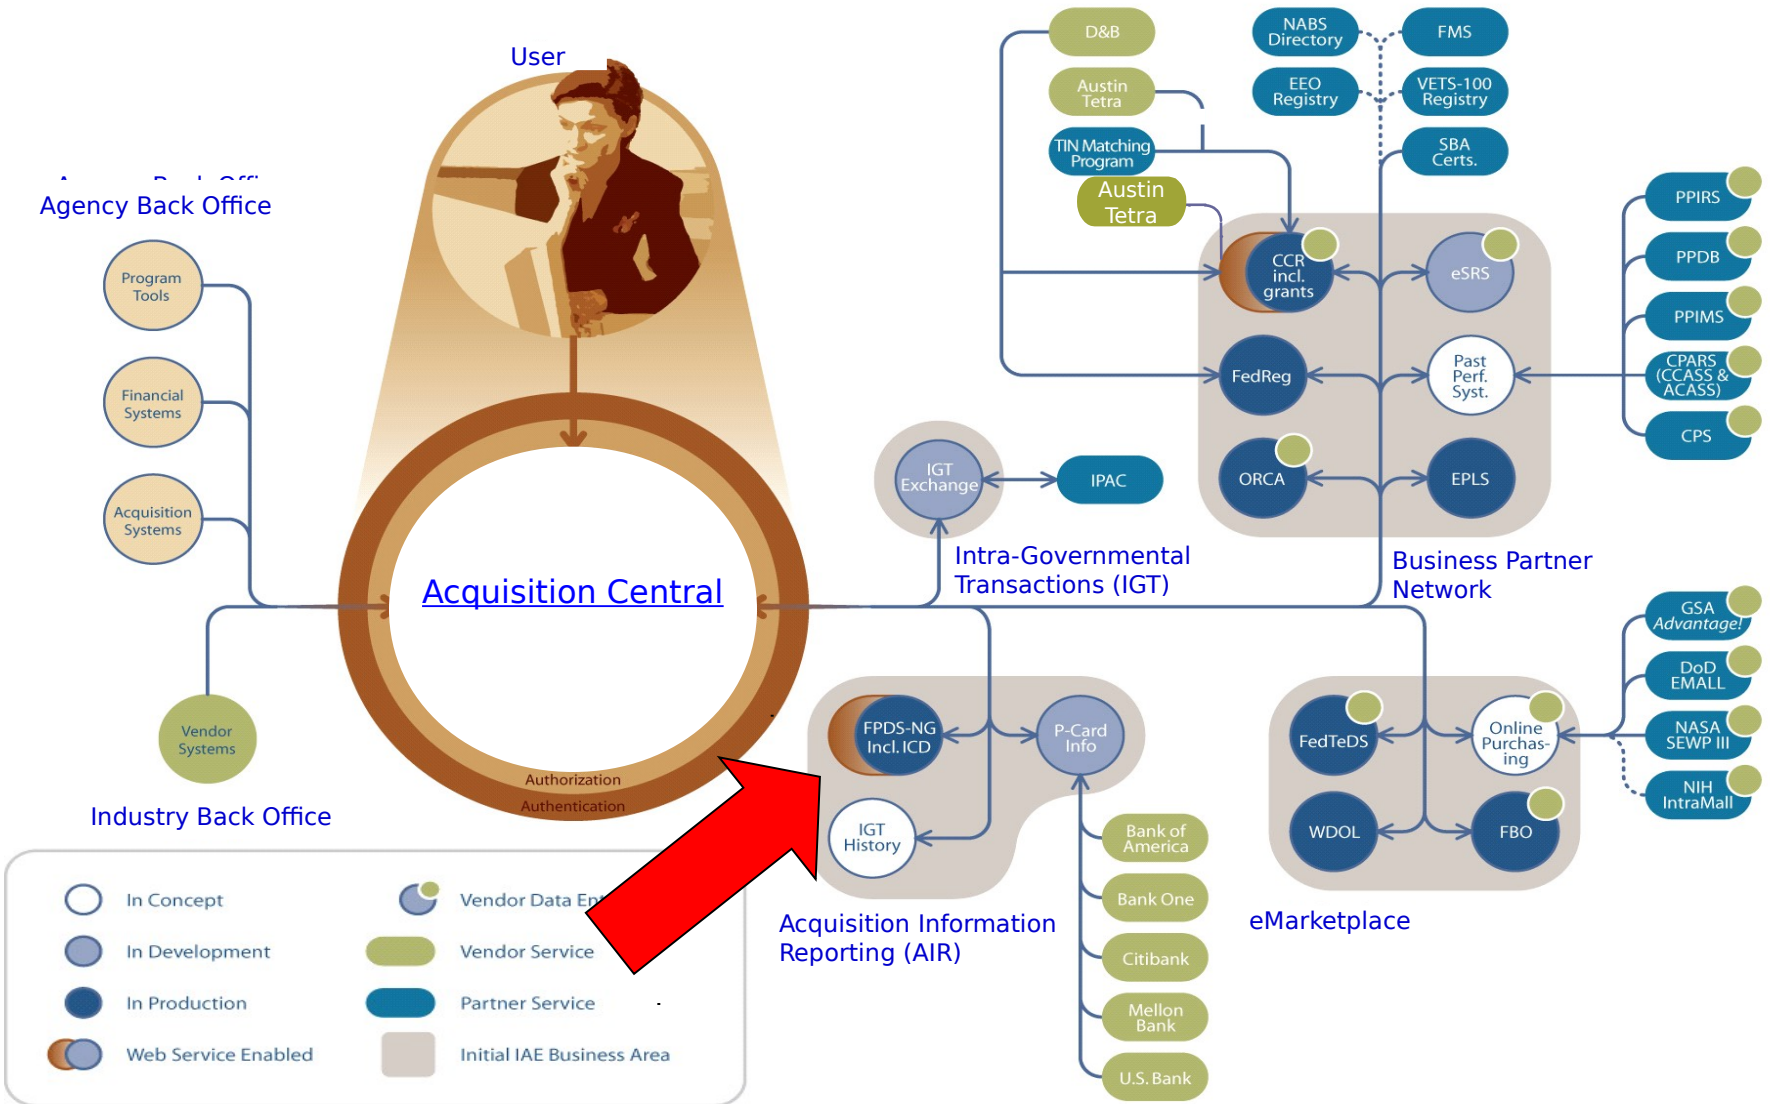

## Data availability

- Extracts and/or virtual access for use by DoD systems (e.g. business intelligence)

# The Integrated Acquisition Environment (IAE)

# Sample transition path to FPDS-NG

## Deployment Considerations:

- Type of reporting done at various sites
- Historic workload ebbs and flows
- Contract writing system initiatives

\*Sites Can Start SysAdmin Activities  
Prior to Stop of DD350 Reporting
